RE: 2007 STEERING SHAFT CHANGE
PN: 90-6574 HARDWARE PACK
APPLICATION: 2007 Ford F150 4WD

The factory steering shaft has been change on the 2007 Ford F150 4WD. Due to this manufacturing change, when the factory steering rack is lowered with the 90-2415 spacers, the factory steering shaft contacts the frame. We have created a fix for this issue that will be incorporated into the kits. The fix will include (4) 90-2726 .50" spacer instead of the (2) 1.00" spacers. If you have a 2004-2006 you can stack the two spacers to drop the steering rack 1.00". In the 2007 vehicles you will need to install one of the 90-2726 spacers on each side; on the top of the rack and on the bottom to give you .50" of total drop of the factory rack and the other .50" will take up the space on the bottom of the mount. In the mean time the 90-6574 will be available from Pro Comp.

Thank You,

Engineering Department
